

WAYNE COUNTY DEPARTMENT OF PUBLIC SERVICES ENGINEERING DIVISION

EDWARD H. McNAMARA COUNTY EXECUTIVE

G.E. SIEMERT, P.E. DIRECTOR AND COUNTY HIGHWAY ENGINEER (313) 224-7758

US EPA RECORDS CENTER REGION 5

September 5, 1990

U.S. E.P.A. Mr. Ralph Dollhopf On-Scene Coordinator Eastern Response Unit 9311 Groh Road Grosse Ile, MI 48138

Dear Mr. Dollhopf:

This is in response to the information you requested during our telephone conversation earlier today. I have obtained the following thus far; I will update this response based upon your review of this document.

On Friday, August 24, 1990, a Hazardous Materials Response Team was sent to 15495 Sheldon Road, Northville Township, Michigan, to investigate a chemical spill. The spill was battery acid (sulfuric acid). The estimated volume is less than five gallons. The spill occurred on the basement floor of the powerhouse in an area where there were approximately 60 batteries stored for backup energy supply. This area also had a large hot electrical panel with 5,000 volts. There were also approximately ten 55-gallon drums of labeled liquids, eight of which were unopened. The open drums appear to be motor oil. There were also a number of open containers containing powders. The spill was neutralized with Potash by K & D Environmental Services, Inc., 6470 Beverly Plaza, Romulus, Michigan 48174 313/729-3350, and the building was secured.

On Wednesday, August, 29, 1990, in response to your directions, security guards were added to safeguard the facility.

On Thursday, August 30, 1990, K & D started to clean up the spill material by shoveling the neutralizing material into drums and ventilating the area.

On Tuesday, September 4, 1990, the following materials in overpack drums were transported via a County truck to Central Maintenance Yard at 299000 Goddard Road, Romulus, Michigan 48174. (NOTE: These drums with original seals were opened by K & D when they collected samples.)

* Six 55-gallon drums of Dearsol 30, Dearborn Chemical Company. The hazardous component consists of 77% diesel fuel; the remainder is other materials which

415 CLIFFORD DETROIT, MI 48226 (313) 224-7600 were added to improve combustion characteristics. According to the manufacturer, this material has not been produced since 1972, and thus pre-dated MSDS requirements. The manufacturer is mailing us all the information that is not protected by trade secret. No MSDS is available.

- * Sixty non-leaking lead acid batteries, placed within four plastic overpack drums, the County proposed to sell the batteries under an existing contract.
- * One 55-gallon drum of Alkafilm MSDS in overpack is enclosed. The County proposes to use this material in one of its boilers; i.e. use the material for its intended purpose.
- * One 55-gallon drum of Dearborn 692 in overpack. The County proposes to use this material in one of its boilers; i.e., use the material for its intended purpose.
- * Approximately two gallons of cutting oil. Material is to be used for its intended purpose.

The remainder of the materials were sampled by K & D. K & D split the samples with me. Our samples were submitted to Air Pollution Control Division on Wednesday, September 5, 1990.

On Wednesday, September 5, 1990, Tom Schmelzer appointed me as the County employee in charge of this remediation.

From our telephone conversation earlier today, the following additional steps are proposed:

- 1. Reinspect the facility to determine containment methods for tunnels entering the powerhouse.
- 2. Ascertain source of vapors still present in the building. It is my opinion that this was caused by continued reaction between acid and base.
- 3. Direct additional cleanup of neutralized material; there is still a great amount present on the basement floor. Use of a vacuum as opposed to shovels will be suggested.
- 4. Advise you of sample analysis results and furnish you copies along with proposed use/disposal.
- 5. Survey adjacent buildings for hazardous

You will be advised of what activities will be conducted and when, subject to your approval and concurrence. This response is expected to be reviewed by the attached distribution. Corrections, additions and clarifications should be sent to me at Architectural and Facilities Engineering, Neudect Building, 5th Floor, 415 Clifford, Detroit, Michigan 48226. (313/224-7768) FAX 313/224-2609

I swear that the above information is true to the best of my knowledge, information and belief.

Mark L. Manor, CHMM

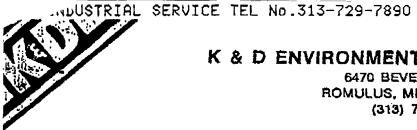

Hazardous Materials Manager

Mr. Ralph H. Dollhopf U.S. E.P.A. Rastern Response Unit 9311 Groh Road Grosse Ile, Michigan 48138

re: Wayne County project in Farmington Hills

Dear Sir,

In response to your request for a work and safety plan, I am pleased to inform you that I am mailing copies of our standard procedures.

However, I would like to provide you with a brief summary of our work procedures.

Our first priority is to neutralize any leaking batteries, or areas where the leaking acid has contaminated, with soda ash. We will then place all of the batteries and any acid contaminated materials into plastic over-pack drums. This procedure will be conducted utilizing level "B" protection. We will also be continuously monitoring the air quality while we ventilate using large fans. When we have completed this task we will then place the acid contaminated materials from our roll-off box over-packs and include them with the battery group.

The next step will be to place the lidless drums into over-pack drums and segregate the drums into groups of comparable materials. This procedure will also be conducted with level "B" protection unless the air quality has improved. We will then sample all of the drums. When sampling is completed we will place a)1 of the drums into over-pack drums and identify all of the drums with corrosive labels. The samples will then be compiled and the compiled samples will be submitted for analysis.

The next order of business will be to gather all of the small containers that are scattered throughout the building and segragate them into comparable groups. We will then take samples of these materials, prior to placing them into over-packs. compile the samples and submit the compiled samples for analytical. The drums will then be appropriately labeled.

The final step, according to the guidelines that you established at the site on 8/29/90, will be to take samples from some bags that were located on the second floor, place the bags into an over-pack, and submit sample for analysis as these bags may contain asbestos.

K & D will then assist Wayne County in choosing proper disposal facilities and methods for these materials. Once disposal approvals are in place, K & D will begin transporting the materials for disposal.

Of course, if we encounter any other hazards or contaminates at this site we will report them to Wayne County and suggest appropriate action.

If you have any further questions or require additional information, please do not hesitate to call.

Respectfully,

Ken Markey

TOXICITY INFORMATION.

no TLV established for product, see section 2 for component information.

EFFECTS OF OVEREXPOSURE:

Prolonged inhalation of vapors or mist may irritate masal passages. INHALATION:

INGESTION: Haraful if suallowed.

SKIN OR EYE CONTACT: Prolonged or frequent skin contact may cause irritation.

EMERGENCY AND FIRST AID PROCEDURES

INHALATION: Remove affected persons to fresh air and treat symptoms.

INGESTION: Drink water or citrus juice to neutralize. Contact physician

SKIN CONTACT: Wash with soap and water. Remove contaminated clothing and wash

before reuse.

EYE CONTACT: Flush with water and seek medical attention.
